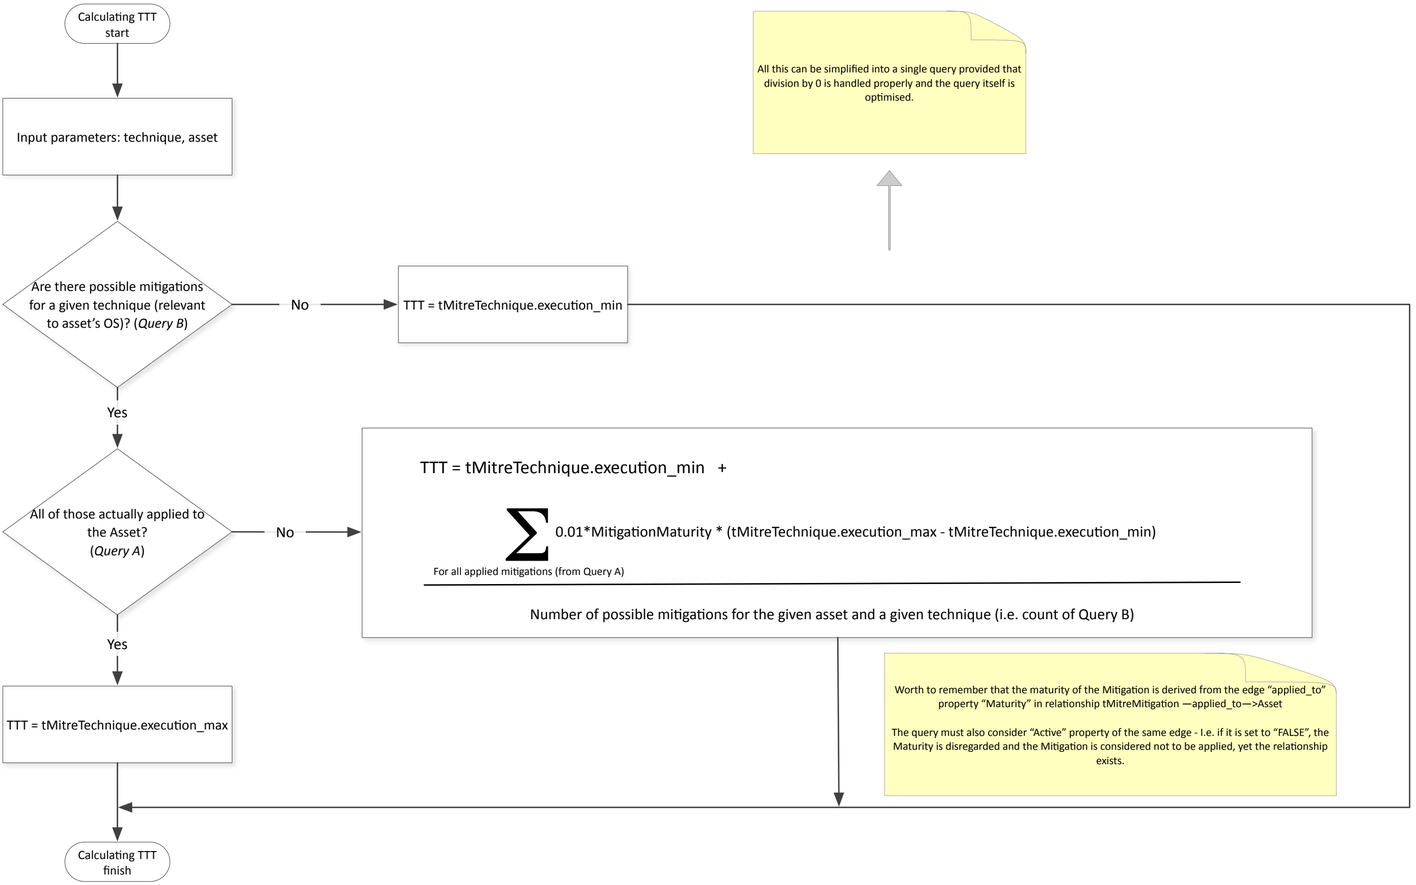
TTT - Time to execuTe a Technique - time interval required to execute a technique/subtechniqe on a particular node, considering mitigations applied
(*Remember, from MITRE standpoint technique and subtechnique are similar objects except having different hierarchical relationships).*



Query B

The existing mitigations for a given technique/subtechnique (relevant to asset's OS)

```
MATCH (a:Asset)-[:runs_on]->(os:OS_Type)-[:represents]->(p:MitrePlatform)<-
[:can_be_executed_on]-(t:tMitreTechnique)<-[:mitigates]-(m:tMitreMitigation)-[:applied_to]-
>(a)
WHERE id(a) == "A00014" AND id(t) == "T1071.001"
RETURN m.tMitreMitigation.Mitigation_ID AS mitigation_id,
       m.tMitreMitigation.Mitigation_Name AS mitigation_name,
       t.tMitreTechnique.Technique_ID AS technique_id,
       t.tMitreTechnique.Technique_Name AS technique_name,
       p.MitrePlatform.platform_name AS platform
ORDER BY mitigation_id;
```

The output gives (for a given asset and a technique)

[ESP01]> MATCH (a:Asset)-[:runs_on]->(os:OS_Type)-[:represents]->(p:MitrePlatform)<-[:can_be_executed_on]-(t:tMitreTechniqu e)<-[:mitigates]-(m:tMitreMitigation)-[:applied_to]->(a) WHERE id(a) == "A00014" AND id(t) == "T1071.001" RETURN m.tMitreMitig ation.Mitigation_ID AS mitigation_id, m.tMitreMitigation.Mitigation_Name AS mitigation_name, t.tMitreTechnique.Technique_ID...

Table

mitigation_id	mitigation_name	technique_id	technique_name	platform

Query C

The possible mitigations for a given technique (relevant to asset's OS)

```
MATCH (a:Asset)-[:runs_on]->(os:OS_Type)-[:represents]->(p:MitrePlatform)<-
[:can_be_executed_on]-(t:tMitreTechnique)<-[:mitigates]-(m:tMitreMitigation)
WHERE id(a) == "A00014" AND id(t) == "T1071.001"
RETURN m.tMitreMitigation.Mitigation_ID AS mitigation_id,
       m.tMitreMitigation.Mitigation_Name AS mitigation_name,
       t.tMitreTechnique.Technique_ID AS technique_id,
       t.tMitreTechnique.Technique_Name AS technique_name,
       p.MitrePlatform.platform_name AS platform
ORDER BY mitigation_id;
```

The output gives (for a given asset and a technique)

[ESP01]> MATCH (a:Asset)-[:runs_on]->(os:OS_Type)-[:represents]->(p:MitrePlatform)<-[:can_be_executed_on]-(t:tMitreTechniqu e)<-[:mitigates]-(m:tMitreMitigation) WHERE id(a) == "A00014" AND id(t) == "T1071.001" RETURN m.tMitreMitigation.Mitigation_I D AS mitigation_id, m.tMitreMitigation.Mitigation_Name AS mitigation_name, t.tMitreTechnique.Technique_ID AS technique_id, ...
